## **Braided Flexible Metal Pump Connectors**

PROCO Products braided flexible metal pump connectors have been designed to control vibration, reduce noise, relieve stress, prevent system shock and compensate for misalignment and movement. Use of braided metal connectors for applications such as pumps, compressors, and other mechanical equipment will enhance the overall operation of the system.

Flexible metal hose by itself, when subjected to high pressure can over-extend past the ability to operate properly. It is necessary, therefore, to include an external flexible restraint (i.e., braid) to withstand the specified internal pressure and prevent excessive elongation. Braid, (woven metal) is designed to fit snugly over metal hose and is fastened to the ends of both hose and fittings. This braid is designed to be strong enough to withstand elongation for the full pressure rating of the hose.

Flexible metal hose and braid can be made from a variety of different metals to meet industry needs. Specification of the hose and braid is determined by temperature, pressure, flow media, application and external environment. Common materials used for braided flexible metal connectors are 321 stainless steel hose and a 304 stainless steel braid and are carried in stock by PROCO Products. The products contained in this catalog are representative of the typical sizes, lengths and materials found for pump connectors; however, other materials and lengths are available and can be ordered per customer specification.

#### PROCO "The Expansion Joint and Check Valve People"

#### PROCO PRODUCTS, INC. IS HEADQUARTERED IN STOCKTON, CALIFORNIA

Our 17,144 square foot warehouse houses one of the largest inventories of expansion joint products in North America. PROCO is a major supplier of rubber expansion joints, PTFE expansion joints, rubber pipe vibration dampeners, low torque gaskets, threaded union rubber connectors, flexible metal pump connectors, and duck billed rubber check valves.

PROCO markets products to the power generation industry, refinery & chemical process industry, HVAC industry, pulp & paper industry, water & waste-water treatment industry and general industrial institutions through a distribution network.

For a complete catalog of important products offered by PROCO, please contact the Customer Service Department at 800-344-3246 (USA/Canada). **209-943-6088** (International) or use the attached specification sheet found on the back page of this catalog and fax your request to 209-943-0242.

specific application should not be undertaken without independent study and evaluation for suitability

## Largest Inventory

**Proco** has one of the largest inventories in North America. Our customer service staff is ready to field your request.

#### **Emergencies Happen**

When they do and you need one of **PROCO**'S various standard products, it is relieving to know we can respond with same day shipment from order placement.

So when you or your customer have an emergency request. . .

CALL **PROCO**! Day or night, **PROCO** will respond to your request and meet your urgent need.

#### **After Hours Service**

Call our 800 Number with your Urgent Request!

We will respond to meet your urgent need. There is no other phone number to remember.

## Expedite Shipping

PROCO'S Stocked Inventory can ship same day as order placement. . . .

Customer's can also count on consistent shipping costs due to our contracts with various well known carriers.

Our shipment tracking system also gives customers assurance that their package is always accounted for.

We can ship Standard Surface, 2nd or Next Day Air.
In addition, our experience in export shipments is second to none.

PROCO Office hours are: 5:30 am to 5:15 pm (PST) • Monday thru Friday

## Temperature

Temperature correction factors and maximum material temperature ranges for braided flexible metal pipe connectors.

		11/1/11/11/11	CARLES AND CO.
Temp		Material	
º <b>F</b>	Bronze	304 SS	321 SS
Ambient	1.00	1.00	1.00
150	.92	.96	.97
200	.89	.92	.94
250	.85	.91	.92
300	.83	.86	.88
350	.81	.85	.86
400	.78	.82	.83
450	.75	.80	.81
500		.77	.78
600		.73	.74
100		.69	.70
800		.64	.66
900		.58	.62
1000			.60
1100			.58
1200			.55
1300			.50
1400			.44
1500			.40

#### **Temperature Correction Factors**

- 1. Determine maximum operating temperature.
- 2. Locate appropriate correction factor above.
- 3. Multiply maximum working pressure by correction factor at temperature for acceptable rating.

Service temperature for a braided flexible metal pump connector has a negative affect on the amount of maximum pressure to which it can be subjected. The table above should be used to calculate the safe working pressure based on the elevated temperature the braided metal pump connector is operating under. (Working Pressure X Elevated Temperature Conversion Figure = Safe Working Pressure.)

Contact PROCO'S sales office at 1-800-344-3246 (209 943-6088 outside USA/Canada) if help is needed with using the temperature correction chart.

## Installation Instructions

To obtain maximum service life from a Proco Braided Flexible Metal Connector, please consider the following:

Proper placement is essential to the operating life of a flexible connector. For best results place flexible connectors adjacent to rotating equipment, in a straight line without offset. Flexible connectors installed before and after rotating equipment will help isolate the piping system from excessive vibration and noise. Anchors should be installed immediately beyond the connector.

Braided flexible metal connectors must be installed at or below the listed permanent lateral offset values listed on pages 3-6 of this manual.

Failure to stay within these parameters can reduce the operating life of the flexible connector.

Figure 1

For lateral movements greater than those listed in tables on pages 3-6, it is possible to install two flexible connectors in a pipe system to achieve greater flexibility. Install two connectors at right angels to one another and between two anchor points. This scheme will allow for increased lateral offset capabilities. (See Figure 1.)

**Flanged Flexible Connectors** Flange alignment should be in accordance with industry standards. Bolt holes should be aligned so that braided flexible metal connectors are free of torsional movements, reduced operating life or failure will occur.

Threaded Flexible Connector Install one end of threaded connector to loose union and tighten. Install opposite threaded end of flexible connector to threaded pipe fitting and tighten. When installing union end to adjacent pipe fitting, it is important not to introduce torque to the braided flexible metal connector. If the flexible connector is subjected to torsional movements, reduced operating life or failure will occur.

Sweat End Flexible Connector Install female ends of the flexible connector to adjacent male ends of pipe inn such a manner to eliminate any torque that may be imposed during fit-up.

VIBRATION Install in a straight line with a rigid support on the fixed end.

MISALIGNMENT - (PERMANENT MISALIGNMENT) Allow sufficient length to make a gradual bend.

**INTERMITTENT MOVEMENT** Refer to charts on pages 3-6 for maximum movement capabilities. Where offset movement occurs on both sides of the pipe centerline, the braided flexible hose live length should be based on the total stroke. For movement greater than those stated in this manual, it is suggested that a traveling loop system be used.

# Corrosion Evaluation Reference Table

The information contained herein this table is to be used as a guide for the selection of braided metal pump connector materials (i.e. hose and braid) suitable for chemicals listed below. This data should not be construed as advice to use or not use. Ultimate responsibility lies with the system designer or operator for correct material selection based on flow media. It is suggested that flow media be listed on the "Connector Specification Data Sheet", found on the back of this manual when requesting a quotation.
